

SMART DIFFERENTIAL PRESSURE TRANSMITTER

for low ranges APR-2000ALW/G

- ✓ 4...20 mA output signal + HART protocol
- ✓ Display with backlight
- ✓ Programmable range, zero shift, damping ratio and characteristic with local panel keys
- ✓ Selectable linear or radical conversion characteristic
- ✓ Accuracy from 0,1%
- ✓ Intrinsic safety certificate (ATEX, IECEx)
- ✓ Safety version SIL2/SIL3

min. range
0.2 mbar

APR-2000ALW/G Industrial Version,
C type process connector to be
mounted along with a valve manifold

APR-2000ALW/G Economic Version,
process connection with terminal
connecting to Ø6 pipe (**PCV type**)

Application

The APR-2000ALW/G transmitter is applicable to the measurement of differential pressure of gases. Typical applications include the measurement of blast pressure, chimney draughts or pressure / underpressure in furnace chambers. The ability to select the radical conversion characteristics enables the transmitter to be used in gas-flow measurement systems using reducing pipes or other impeding elements. The transmitter can withstand overpressure up to 1 bar. The housing of the electronic circuit has the degree of protection IP66/IP67.

Configuration, calibration

The following metrological parameters can be configured:

- ◆ The units of pressure,
- ◆ Start and end-points of measuring range, damping time constant,
- ◆ Conversion characteristic (radical, inversion, user's non-linear characteristic).

Ability to calibrate the transmitter with reference to a standard pressure.

Communication

Communication with the transmitter is carried out with a KAP-03 communicator, some other Hart communicators or a PC with an Hart/USB converter and RAPORT 2 configuration software.

Additionally, the data interchange with the transmitter enables the users to identify the transmitter, read the currently measured pressure difference value, output current and percentage of measuring range.

Installation

The economical version can be mounted on any stable construction using the mounting bracket. The transmitter's connection shanks have terminals to be connected to the elastic Ø6×1 impulse line. Where the pulse comes through a metal pipe, we suggest an M20×1.5 adapter for a Ø6×1 fitting using.

The transmitter with a C type connector should be mounted on a 3- or 5-valve manifold. We recommend use VM type valves (page IV/ 2).

Operating guidelines

The transmitter should be mounted in a vertical position. The impulse lines should be connected in such a way that any condensed liquids flew off away from the device.

Where there is a significant difference in height between the place where the transmitter is mounted and the place where the pulse is taken, the measurement may vary with the temperature of the impulse line. Connecting a compensating pipe close to the impulse line, from the transmitter's reference connection shank to the height at which the impulse is taken can minimise this effect.

To prevent dust from entering the measuring cells, the impulse lines should be attached with care, with particular attention to the tightness of the connections between the impulse lines and the transmitter.

Measuring ranges

Nominal measuring range (FSO)	Minimum set range	Overpressure limit	Static pressure limit
0...25 mbar (0...2500 Pa)	1 mbar (100 Pa)	1 bar	350 mbar
-2,5...2,5 mbar (-250...250 Pa)	0,2 mbar (20 Pa)	350 mbar	350 mbar
-7...7 mbar (-700...700 Pa)	1 mbar (100 Pa)	350 mbar	350 mbar
-25...25 mbar (-2500...2500 Pa)	5 mbar (500 Pa)	1 bar	1 bar
-100...100 mbar (-10...10 kPa)	20 mbar (2 kPa)	1 bar	1 bar

Meterological parameters

Nominal range	0...25 mbar	-2,5...2,5 mbar	-7...7 mbar	-25...25 mbar	-100...100 mbar
Accuracy	$\leq \pm 0,075\%$	$\leq \pm 0,25\%$	$\leq \pm 0,1\%$	$\leq \pm 0,1\%$	$\leq \pm 0,075\%$

Thermal error $< \pm 0,1\%$ (FSO) / 10°C
max. $\pm 0,4\%$ (FSO) in the whole compensation range
Thermal compensation range $-10...70^\circ\text{C}$
Additional electronic damping 0...30 s
Error due to supply voltage changes 0,002% (FSO) / V

Operating conditions

Operating temperature range (ambient temp.) $-30...85^\circ\text{C}$

Materials

Electrical parameters

Power supply 10...55 VDC (Exia 10,5...30 V DC)
Safety: 11,5...36 VDC (Exia 11,5...30 V DC)
Output signal 4...20 mA + HART
Load resistance (for standard version) $R[\Omega] \leq \frac{U_{\text{supl}}[\text{V}] - 10\text{V}}{0,0225\text{A}}$
Resistance required for communication min. 240 Ω

Casing

adapter C type,
adapter PCV type (on $\varnothing 6$ elastic pipe)

Aluminium
option: 316ss
304ss
brass
