

Flange type of nozzle flowmeter ZPK

Technical data:

- nominal pressure PN6+PN100
- size of flowmeter DN25+DN800
- material of flow element (orifice, nozzle):
stainless steel 1.4301
- material of construction elements:
carbon steel
austenitic steel
stainless steel
- temperature up to 500°C
- material certification
- calculation acc. to PN-EN ISO 5167, ISO/TR 15377

Application:

Nozzle flowmeter is used for flow measurement of liquid medium in close pipeline.
An orifice plate installed in line creates a pressure drop. This difference of pressure is measured via impulse line by differential pressure transmitter. The relationship between the rate of flow and pressure drop is very well known and allows to easily convert measured pressure difference to flow value.
Flowmeters without correction are used for mediums with constant values of pressure and temperature.
For custody transfer measurement it's recommend to use differential pressure transmitters without SQRT characteristic and correction from changes of medium's pressure and temperature. This kind of measurement have to be calculated in dedicated flow counters.
Characteristic:

- high accuracy of measurement in wide range of flow
- resistant for aggressive media
- work in wide range of temp. and pressure

- material of flow element:
stainless steel 1.4301
- material of construction elements:
carbon steel
austenic steel
stainless steel
- temperature up to 500°C
- material certification
- calculation acc. to PN-EN ISO 5167, ISO/TR 15377

Application:

Measurement based on orifice plate with differential pressure transmitter is most widely used type of flow measurement. It can be used in flow measurement of steam, water and gases.

The biggest advantages of this solution are:

- high accuracy in wide measuring ranges
- applicable to measure flow of neutral and aggressive mediums
- easy calibration
