

Instruction for use for visual level controller

Operation

The visual level controllers mounted with their tubes allow visualizing the height of fluid remaining in a tank or other box. The visual level controllers can isolate some liters of fluid from the capacity if the user so wishes (Ref. 149/449, 150/450, 184, 2184, 3184, 2276 and 278), and can be also equipped with a purge system (low point of set) for easy maintenance.

Ref. 3184
